

aboutIT

aboutIT

- Website hosting services on our servers
- Off-site storage & automated backup service
- Secure remote access to company files & systems (managed VPN)
- Customized protection from unwanted network intrusions (managed firewall)
- Managed phone, internet and IT (managed LAN)

Special Features to Increase Productivity

- Virtual Private Network (VPN) allows your employees to access applications on your LAN securely. Employees can work at home with remote data access - the perfect complement to the powerful remote access feature in Integrated Communications Service.
- Manage your own website allowing you to make changes instantly
- Set up protected sub-domains for internal web applications to allow employees or customers access information that you don't want open to the public internet
